

57917 # #

list are pretty easy to use, you use:

1. + 2. - 3. *

For an ordered list, you can just use 1. and the browser will know.

1. Fashion
1. Pop culture
1. Art

To append sub-items, just indent it and the item name. And if you want to add a image or write a paragraph just add an empty line then your text.

1. Fashion * streetwear?

Well obviously, ...

([1021](https://zenonline.com/image01.jpg))

Lin Break, Horizontal lines, and Blockquotes

> Now great pic!! - Fallbach

7 Thank you :) - Sam

< 19 >

Code Blocks

If you just want the straight forward way, just write your lines
code then indent them.

or, to specifically tell the browser or editor you're using ... javascript

JavaScript

$\text{"dog", "wor"} = \text{dog}$ $\text{"wor", "dog"} = \text{dog}$
 $\text{"new", "i"} = \text{new}$ $\text{"i", "new"} = \text{new}$

line deleted
line added

Also,

They did you try (backtick) var x = 100 (backtick) ?
