

Mastering Markdown

It seems like markdown can be used ~~the~~ to write blogs et.c. What you have to focus on when it comes to markdown are the symbols used to edit text, create tables, highlighting. Basically the editing tools equal symbols

Headings

h1 #

h2 ##

...

h1 =====

h2 -----

I prefer to use the '#' because you can edit headings from heading 1 to whatever desired number like: '#### #' same h5. And '=' just ends with '-'

Links in Markdown

<http://zenonline.com>

<<http://zenonline.com>> this will precisely create a link, straight forward

Also,

[\[Go to zen\]\(https://zenonline.com\)](https://zenonline.com)

☺ I like, i like

[\[Zenonline.com\]\(https://... "An online platform."\)](https://...)

Make sure you check out [\[zen magazine\]\[2\]](#) site.

[1]: <https://zenonline>

or you can use words e.g [zen]: <https://zen...>

Images in Markdown

Images in markdown work similar with link but with a barn!¹

! [\[Wow great pic!!\]\(httphttps://unsplash.it/100/100?streetwear\)](#)

You can also use html tags
